

What Is Claimed Is:

1. A process for reducing the production of ammonia and odors in an animal habitat containing fecal matter and urine comprising the steps of treating said habitat with an aqueous solution of trichloromelamine containing an effective amount of trichloromelamine, wherein the application of the solution, is at a point in time wherein it can affect the production of ammonia and odors from nitrogen and sulfur bearing compounds as may be present in the habitat.
2. The process of claim 1 wherein the treatment of the habitat with trichloromelamine is prior to the placement of animals in the habitat.
3. The process of claim 1 wherein the treatment of the habitat with trichloromelamine is after placement of the animals in the habitat.
4. The process of claim 1 wherein the treatment of the habitat with trichloromelamine is prior to and after placement of the animals in the habitat.
5. The process of claim 1 wherein the treatment of the habitat is effected by soaking said habitat with the aqueous solution of trichloromelamine.
6. The process of claim 2 wherein the treatment of the habitat is effected by soaking said habitat with the aqueous solution of trichloromelamine.
7. The process of claim 3 wherein the treatment of the habitat is effected by soaking said habitat with the aqueous solution of trichloromelamine.
8. The process of claim 4 wherein the treatment of the habitat is effected by soaking said habitat with the aqueous solution of trichloromelamine.
9. The process of claim 1 wherein the concentration of trichloromelamine

is from about 50 to about 500 ppm..

10. The process of claim 5 wherein the concentration of trichloromelamine is from about 50 to about 500 ppm..
11. The process of claim 6 wherein the concentration of trichloromelamine is from about 50 to about 500 ppm.
12. The process of claim 7 wherein the concentration of trichloromelamine is from about 50 to about 500 ppm.
13. The process of claim 1 wherein the concentration of trichloromelamine is from about 100 to about 200 ppm.
14. The process of claim 5 wherein the concentration of trichloromelamine is from about 100 to about 200 ppm.
15. The process of claim 6 wherein the concentration of trichloromelamine is from about 100 to about 200 ppm.
16. The process of claim 7 wherein the concentration of trichloromelamine is from about 100 to about 200 ppm.
17. The process of claim 1 wherein the treatment of the habitat with trichloromelamine is effected by dusting with powdered trichloromelamine.
18. The process of claim 2 wherein the treatment of the habitat with trichloromelamine is effected by dusting with powdered trichloromelamine.
19. The process of claim 3 wherein the treatment of the habitat with trichloromelamine is effected by dusting with powdered trichloromelamine.
20. The process of claim 4 wherein the treatment of the habitat with trichloromelamine is effected by dusting with powdered trichloromelamine.

21. A process for sanitizing an animal habitat comprising the steps of treating said habitat with an aqueous solution of trichloromelamine containing an effective amount of trichloromelamine wherein the application of the trichloromelamine is done in such a manner as to bring the trichloromelamine into contact with bacteria as may be present in the habitat.
22. The process of claim 21 wherein the treatment of the habitat with trichloromelamine is prior to placement of the animals in the habitat.
23. The process of claim 21 wherein the treatment of the habitat with trichloromelamine is prior to placement of the animals in the habitat.
24. The process of claim 21 wherein the treatment of the habitat is after placement of the animals in the habitat.
25. The process of claim 21 wherein the treatment of the habitat is effected by soaking said habitat with a solution of trichloromelamine..
26. The process of claim 21 wherein the treatment of the habitat is effected by soaking said habitat with a solution of trichloromelamine.
27. The process of claim 21 wherein the treatment of the habitat is effected by soaking said habitat with a solution of trichloromelamine.
28. The process of claim 25 wherein the concentration of trichloromelamine is from about 50 to about 500 ppm.
29. The process of claim 26 wherein the concentration of trichloromelamine is from about 50 to about 500 ppm.
30. The process of claim 27 wherein the concentration of trichloromelamine is from about 50 to about 100 ppm.

31. The process of claim 25 wherein the concentration of trichloromelamine is from about 100 to 200 ppm.
32. The process of claim 26 wherein the concentration of trichloromelamine is from about 100 to 200 ppm.
33. The process of claim 27 wherein the concentration of trichloromelamine is from about 100 to 200 ppm.
